

Project Info: Pizza Edition

1) Executive Summary

This project explores **pizza**: a circular productivity tool that turns hunger into happiness and meetings into tolerable experiences.

Status: Active and delicious.

Confidence level: High. (Unlike most project plans.)

2) Objectives

- Deliver maximum flavor with minimal regret.
- Maintain structural integrity (no “topping landslide incidents”).
- Achieve a crust that says: “I tried,” without screaming: “I gave up.”

3) Scope

In Scope

- Dough, sauce, cheese: the holy trinity.
- Toppings that behave responsibly.
- Cutting the pizza into slices that are *mostly* equal (we are not doing geometry today).

Out of Scope

- Pineapple debates. This document is not a battlefield.
- “Just a small extra topping” that triples the price and destabilizes the ecosystem.
- Folded pizza being called a “sandwich.” Let’s not.

4) Key Deliverables

- **MVP (Minimum Viable Pizza):** Cheese + sauce + crust that doesn’t taste like cardboard’s cousin.
- **Version 2.0:** One bold topping choice + one sensible topping choice.
- **Enterprise Edition:** Extra cheese, extra napkins, and someone saying “we should’ve ordered more.”

5) Stakeholders

- **Primary user:** You (hungry).
- **Secondary user:** Anyone who says “I’ll just have one slice” (they won’t).
- **Critical partner:** The oven (moody but powerful).

- **Risk committee:** Your stomach at 2 AM.

6) Timeline

- **Discovery Phase:** “What do we want?” (10 minutes)
- **Decision Phase:** “Anything is fine.” (25 minutes)
- **Execution Phase:** Order placed with confidence. (2 minutes)
- **Delivery Phase:** Tracking the driver like it’s a space mission. (eternity)

7) Risks & Mitigations

Risk: Soggy crust

Mitigation: Higher heat, less sauce, emotional resilience.

Risk: Cheese slide-off

Mitigation: Let it rest for 60 seconds. Yes, patience. I’m sorry.

Risk: One person eats half the pizza

Mitigation: Call it “resource rebalancing” and order a second pizza.

Risk: Pizza arrives and is “just okay”

Mitigation: Add chili flakes and lower your standards temporarily.

8) Quality Assurance

Pizza is considered acceptable if:

- The first bite makes you do the little nod.
- The slice can be lifted without flopping like a sad floppy hat.
- The crust is edible without dipping it in “pure coping mechanism” (aka ranch).

9) Notes

If someone asks why we’re doing this:

- Tell them it’s **strategic carbo-loading**.
- Mention **cross-functional cheese alignment**.
- Then immediately stop talking and eat.
